                                                                                                                                                                                                                                                                                                                                                                                                                             4822
                                                                                                                                                                                                                                                                                                                                                                        4703 TCTGTTACAGGTCACTAATACCATCTAAGTAGTTGATTCATAGTGACTGCATATGTTGTG 4762
                                                           The present sequence is that of vector plasmid pJMF3, which includes phage lambda attP and the lac promoter with the first 21 amino acids of lacZ-alpha (from plasmid pUC19) fused in-frame to the Vibrio harveyi chicobiase gene (see AAB20484). The invention relates to genetic constructs and methods of using a cytoplasmic form of chitobiase enzyme as reporter. A claimed reporter gene construct comprises pJMF3. The invention also comprises expression vectors which express the cytoplasmic form of chitobiase. Methods are provided for: characterizing a promoter; identifying a regulatory alement capable of directing and regulating transcription within a test sequence; detecting a successful transformation; and for monitoring the activity of a promoter. Chitobiase has an advantage over beta-galactossidase as a reporter gene in that it is not necessary to engineer many host cells to lack reporter activity.

phage lambda attP and the lac promoter with the first 21 amino acids of lacZ-alpha (from plasmid puCl9) fused in-frame to the Vibrio harveyi chitobiase gene (see AAE20484). The invention relates to genetic constructs and methods of using a cytoplasmic form of chitobiase enzyme as a reporter. A claimed reporter gene construct comprises pUMF4. The invention also comprises expression vectors which express the cytoplasmic form of chitobiase. Methods are provided for: characterizing a promoter; form of chitobiase. Methods are provided for: characterizing a promoter; identifying a regulatory element capable of directing and regulating transformation, and for monitoring the activity of a promoter. Chitobiase has an advantage over beta-galactosidase as a reporter gene in that it is not necessary to engineer many host cells to lack reporter gene in that it is (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TITIACAGIATIAIGIAGICIGITITITIAIGCAAAAICIAAITIAAIAIATIGAIATITA 4922

The present sequence is that of vector plasmid pDYK9, which comprises the Vibrio harveyi chitobiase gene under the control of the Escherichia coli duaA promoter in plasmid pACYC184. pDYK9 was used to assess the regulation of the daaA gene using chitobiase as a reporter enzyme. A claimed reporter gene construct comprises pDYK9. The invention relates to enzyme as a reporter. The invention also comprises expression vectors which express the cytoplasmic form of chitobiase which express the cytoplasmic form of chitobiase. Methods are provided for: characterizing a promoter; identifying a regulatory element capable of directing and regulating transformation; and for monitoring the activity of a promoter. Chitobiase has an advantage over beta-galactosidase as a promoter. Chitobiase has an advantage over beta-galactosidase as a reporter gene system in that it is not necessary to engineer many host cells.
                                                                                                                                                                                                                                                                                               Identifying a regulatory element capable of directing or regulating transcription (e.g. a promoter) comprises providing a construct linked to a nucleic acid encoding a cytoplasmic form of chitobiase.
                                                                                                                                                                                                                                                                                                                                                                          Example 1; Page 29-30; 44pp; English.

Note was collected from a whole adult_individual
from the Tuebingen strain. Ist strand cDNA was primed with
a Not I - oligo(dT) primer, double-stranded cDNA was
cloned into the Not I and ECCRV sites of pExpress-1.
Library was size-selected for >1 kb fragments. A
normalized version of this library is also available
(NNH ZGG_7). Library was constructed by Open Biosystems
(Huntsville, AL).

Bulk tissue was collected from a whole adult individual
from the Tuebingen strain. 1st strand cDNA was primed with
a Not I - oligo(dT) primer, double-stranded cDNA was
cloned into the Not I and EcoRV sites of pExpress-1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Database
                                                                                                                                                 Run on:
```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

histidine-rich protein.
Plasmodium falciparum (malaxia parasite P. falciparum)
Plasmodium falciparum
Bukaryota; Alveolata; Apicomplexa; Haemosporida; Plasmodium.
1 (bases 1 to 2758)
Lenstra,R., d'Auriol,L., Andrieu,B., Le Bras,J. and Galibert,F.
Cloning and sequencing of Plasmodium falciparum DNA fragments
containing repetitive regions potentially coding for histidine-rich
proteins: identification of two overlapping reading frames
Blochem. Blophys. Res. Commun. 146 (1), 368-377 (1987)
